2.- Uncompress the 7Zip multipart file y and verify macOS_for_Pentesters_10.14.dmg

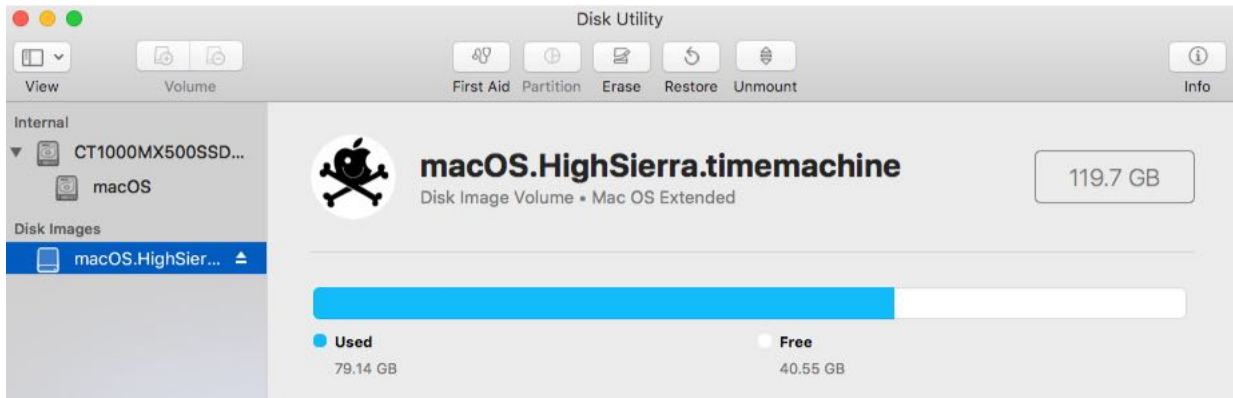

3.- Open Disk Utility on you Mac > Menu > Images > Scan Image for Restore...

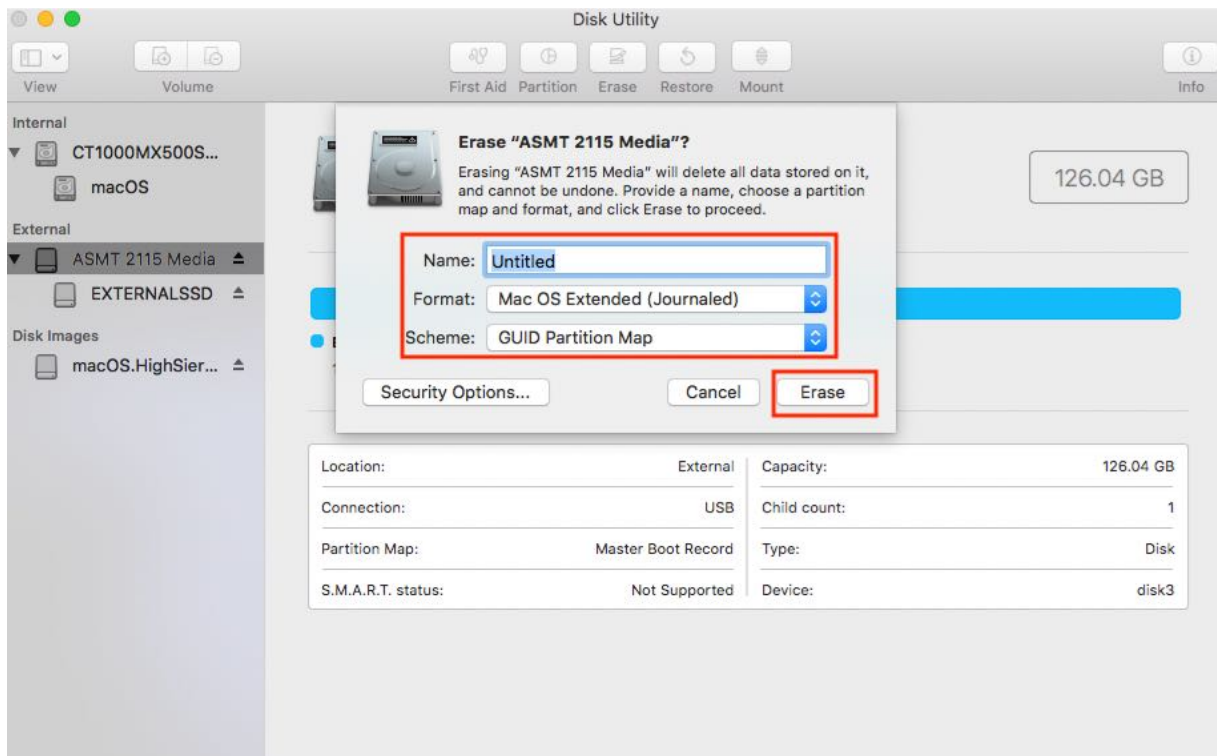

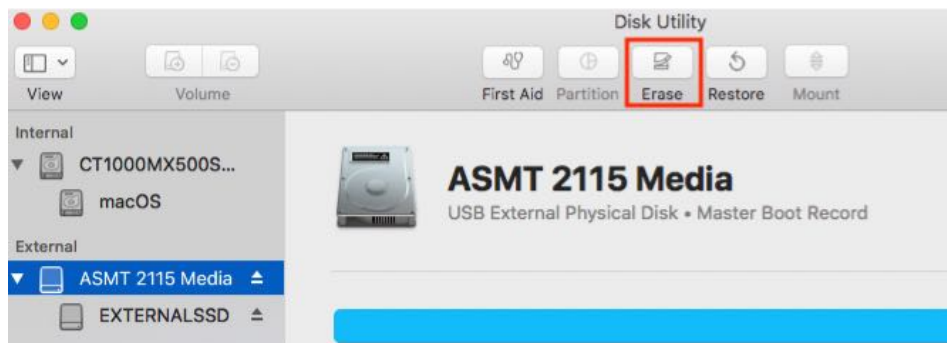

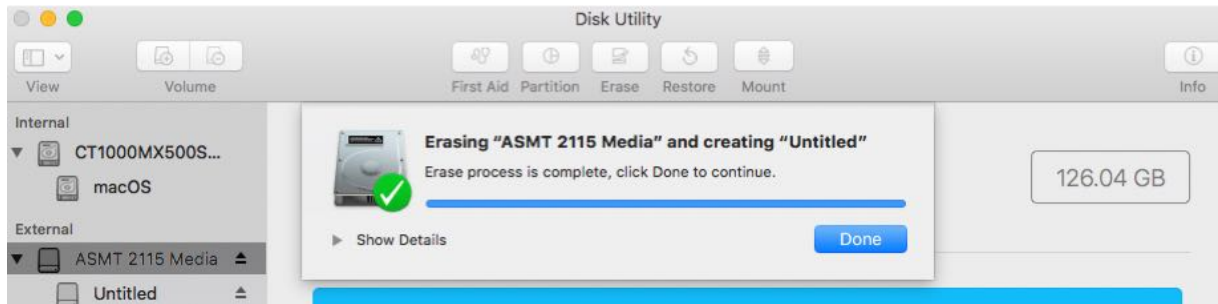

4.- Open the verified disk image and keep it mounted.

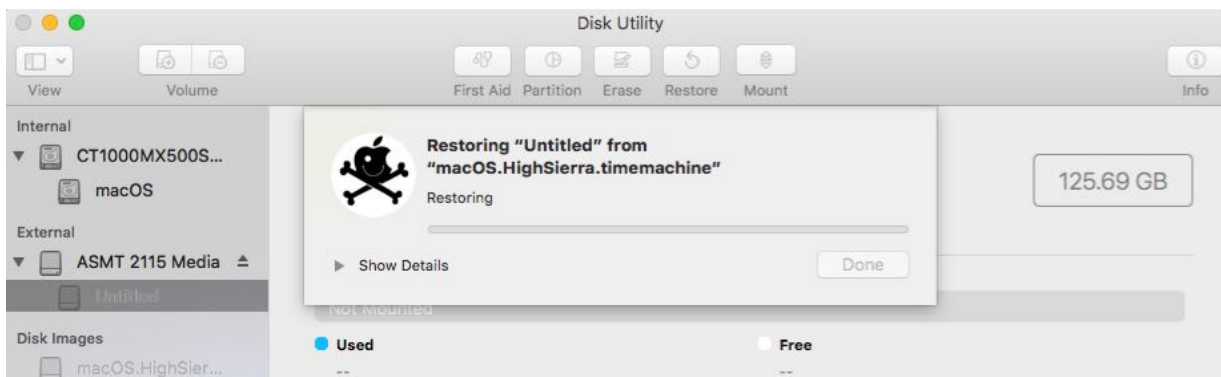

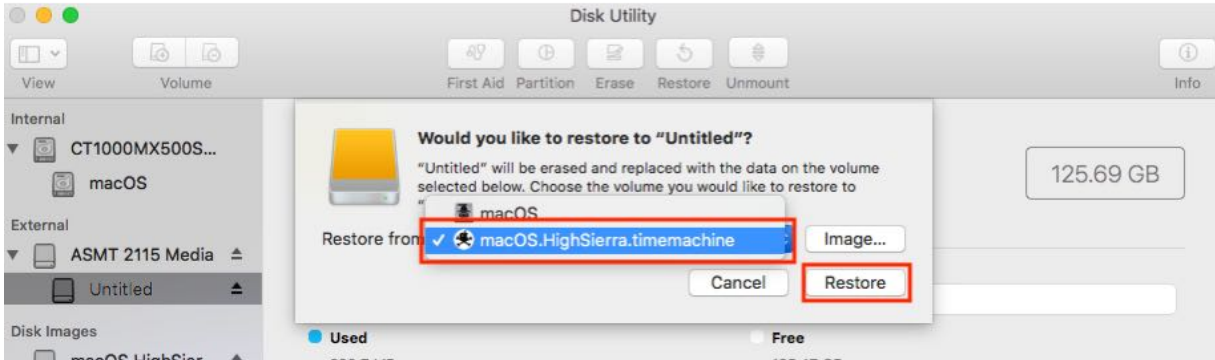

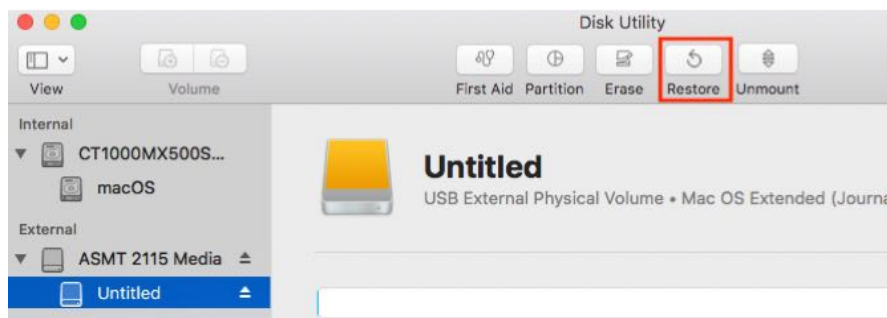

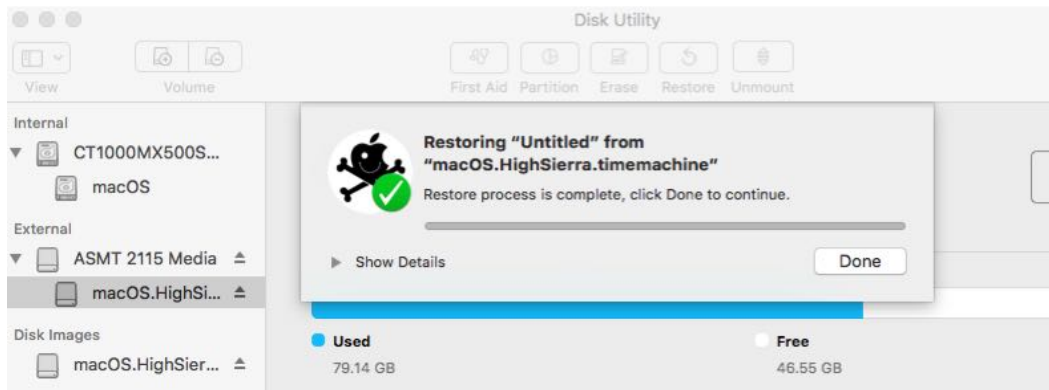

5.- Plug your external drive, select it at left in Disk Utility, click on “Erase” and use the options as shown. (In the View menu of Disk Utility you must check the option Show All Devices)

6.- Select the new partition named “Untitled” at left in Disk Utility, click on “Restore” and use the options as shown.

7.- Now you can restore your Mac using your new TimeMachine disk. Power on your Mac with the disk plugged in and press the “Alt” key during the startup and select the external drive to boot your Mac, wait for the install options and start the TimeMachine 😊 (It is recommended to delete all partitions on the Local Disk before using Time Machine, use the same method as in step 5)

8.- Don’t worry if you get a verification error in the step 6, if the disk restore was fully completed you can start your Mac in Recovery mode by pressing the “Cmd” + “R” keys during startup and then start TimeMachine from Recovery.

9.- The credentials:

Username : User

Password : trustt3ch

10.- There is more information and credentials in “Notes”
